The Context of Coherence

P O S I T I O N

BDTH proceeds from the working position that coherence is not created independently by each living system.

It is expressed through living systems.

The Solar Field represents the proposed environmental context within which terrestrial complexity, life and consciousness have emerged.

This Paper does not present the Solar Field as established scientific fact.

It presents it as the constitutional proposal upon which the wider architecture rests.

OBSERVATION

The Sun is not merely an external object within the human environment.

It is the primary energy source sustaining the conditions within which terrestrial complexity has developed.

Every terrestrial ecosystem exists within its influence.

Every human life depends upon its continuous expression.

The atoms from which living systems are formed were created through processes of stellar ancestry.

The energy through which life operates arrives through the solar relationship.

The human system therefore does not exist independently of its wider environment.

It exists within it.

C O N T I N U I T Y

Complexity does not emerge from isolation.

It emerges through relationship.

The living system is not separate from the conditions that permit its existence.

The organism.

The planet.

The heliosphere.

The Sun.

Each exists within a larger continuity.

BDTH proposes that coherence should therefore not be considered solely as an internal human property.

It may represent the local expression of a broader organising principle.

THE PROPOSAL

The Solar Field is the term used within BDTH to describe this proposed organising context.

It does not imply intention.

It does not imply consciousness.

It does not require a mystical interpretation.

The proposal is simpler:

Where conditions permit complexity to emerge, coherence appears repeatedly as an organising characteristic.

The Solar Field represents the possibility that this organising characteristic has a wider physical context.

DISTINCTION

The distinction between observation and proposal is essential.

Observation:

The Sun provides the energy environment within which terrestrial life exists.

Observation:

Living systems display organised complexity.

Observation:

Human beings experience coherence.

Inference:

These observations may represent expressions of a common organising principle.

Proposal:

The Solar Field represents the wider context within which that principle operates.

THE CONTEXT OF COHERENCE

HUMAN EXPRESSION

Within the human system, coherence is experienced as:

clarity,
integration,
reduced internal conflict,
appropriate response,
and the absence of unnecessary interference.

The Stand-Down does not create coherence.

It reduces interference sufficiently for coherence to become observable.

The same constitutional principle applies:

Nothing new is manufactured.
Something already present becomes available.

NECESSITY

The Solar Field proposal is not required for the practical mechanism of BDTH.

The distinction is important.

The human architecture remains:

Interference obscures.

Witness observes.

Recognition reduces unnecessary authority.

Coherence becomes available.

The Solar Field proposal extends the question beyond the human system:

Why does coherence appear at all?

THE CONTEXT OF COHERENCE

WORKING POSITION

BDTH proceeds from the working position that coherence is not an isolated human phenomenon.

It is a recurring characteristic of organised complexity.

The Solar Field represents the proposal that this characteristic exists within a wider environmental context rather than arising independently within each expression of life.

CLOSING POSITION

The Solar Field is not presented as an answer imposed upon observation.

It is presented as a question emerging from observation.

If coherence is repeatedly expressed wherever complexity becomes organised, then the question is not only:

“How does coherence appear within us?”

It is also:

“What larger conditions allow coherence to appear at all?”

The Solar Field.

The proposed context of coherence.
